

Elmia Solar 2025 – Northern Europe’s meeting place for the industry

Following a successful debut in 2024, Elmia Solar returns in 2025. This time, we’re scaling up the specialised trade fair with a broader range of content and exhibitors, and an extensive programme of presentations and discussions.

Building on the positive experiences and the excellent match between exhibitors and visitors at the first fair, we’re raising the bar for Elmia Solar 2025, which takes place 4–6 February.

“For the upcoming event, we aim to further highlight the wide range of products and services that the fair encompasses. Attendees will find everything from solar panels and EV chargers to the services driving the development of our power grid, energy services and battery solutions,” says Elin Rickardsson, Business Manager for Elmia Solar.

New collaborations and international focus

On the back of the successful 2024 fair, interest in Elmia Solar has grown, attracting even more participants to the next fair. To meet visitors’ demand for information and expertise, the fair in 2025 will feature two stages, with a knowledge-packed programme designed in collaboration with our partners. One example is our partnership with Glava Energy Center:

“As an innovation cluster, we are deeply involved in the industry’s evolution, and Elmia Solar is a natural place for us to be. We see great opportunities and potential for our members at this meeting place for innovators and industry players. Through our presence, we aim to contribute to the development of a smart, renewable and sustainable energy system together with other stakeholders,” says Magnus Nilsson, CEO of Glava Energy Center.

The 2025 fair will have a stronger international presence, with more foreign exhibitors and partners to further embed the event within the industry. One new partner is the Norwegian Solar Energy Cluster (Solenergi Klyngen), which is Norway’s counterpart to Svensk Solenergi – a crucial partner for Elmia Solar as we prepare for the upcoming fair.

“We are proud to partner with Elmia, and together with our members, other industry associations and stakeholders, we are facilitating the evolution and strengthening of key areas in the industry. With the insights gained from the first fair, we look forward to Elmia Solar 2025,” says Anna Werner, CEO of Svensk Solenergi.

With numerous exhibitors already booked and discussions for the programme well under way, we are actively working to reinforce Elmia Solar’s position as Northern Europe’s premier meeting place and enabler for all industry players.
